SUPPLEMENTAL AMENDMENT USSN 09/748 215

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (previously presented) A resin pipe which is formed by injection molding from a resin or a resin compound, wherein said resin is an alloy resin of a blend of a polyamide resin with a resin having a water absorption no higher than 0.3%, said polyamide resin is selected from a polyamide obtained from metaxylylenediamine and adipic acid, and a polyamide resin obtained from ε-caprolactam, and said resin pipe has a tapered inner surface to facilitate demolding such that the taper angle (Θ) satisfies the following relationship:

 $0.5 \times 10^{13} < \tan \Theta < 3.5 \times 10^{-3}$.

- 2. (original) The resin pipe as defined in claim 1, which is an electrically conductive resin pipe formed by injection molding from an electrically conductive resin compound composed of a thermoplastic resin and a conducting material dispersed therein.
 - 3. (canceled)
- 4. (original) The resin pipe as defined in claim 1, which contains a reinforcing inorganic filler dispersed therein.
- 5. (original) The resin pipe as defined in claim 1, which is a base for a photosensitive drum.
- 6. (currently amended) A resin pipe formed by injection molding from a thermoplastic resin or a resin compound based on a thermoplastic resin, said resin pipe comprising:

SUPPLEMENTAL AMENDMENT USSN 09/748/215

an integrally molded projection that radially protrudes outward from an opposite inner end of an outer surface of the resin pipe to an outer end of said resin pipe having a flange and a driving gear formed integrally therewith, wherein the sectional geometry of said projection is selected from a group consisting of triangle, trapezoid, curved object with a round top and a slope, and semi-sphere.

- 7. (previously presented) The resin pipe as defined in Claim 6, wherein the projection is a flange formed on the entire circumference of one end of the outer surface.
- 8. (previously presented) The resin pipe as defined in Claim 6, which is a cylindrical base for a photosensitive drum that is mounted in an electrophotographic apparatus or an electrostatic recording apparatus.
- 9. (original) The resin pipe as defined in claim 6, which is formed from a resin compound containing as the thermoplastic resin at least one species selected from a polyamide resin obtained from metaxylylenediamine and adipic acid, and polyamide resin obtained from E-caprolactam, and an alloy resin obtained by blending a polyamide resin with a resin having a water absorption to higher than 0.3%.

Claims 10-22. (canceled)
